

Multiple Bibliography Files

Alan Arnholt

2015-11-19

To specify multiple `*.bib` files, one might use one of the two specifications below in the `YAML`.

```
bibliography:
- ./MultipleReferences/BrotherBear.bib
- ./MultipleReferences/ReproducibleResearch.bib
- ./MultipleReferences/SmokingExample.bib
- ./MultipleReferences/PackagesUsed.bib
```

OR

```
bibliography: ["./MultipleReferences/BrotherBear.bib", "./MultipleReferences/ReproducibleResearch.bib",
```

My little brother has been busy making tools (J. L. Arnholt and Mair 2002) and helping people (Abadie, Arnholt, and Miller 2010; Lopez and Arnholt 2007).

Reproducible research is critical to science (Peng, Dominici, and Zeger 2006; Fomel and Claerbout 2009; LeVeque, Mitchell, and Stodden 2012; Peng 2011; Hutton and Henderson 2015).

Automagic Generation of R Package References

Suppose the following R packages are used for a project: `PASWR2`, `PDS`, `ggplot2`, `knitr`, and `rmarkdown`.

1. Create an object named `PackagesUsed`.
2. Write the packages used to a `*.bib` file.
3. Load the packages with `lapply()`.

```
PackagesUsed <- c("PASWR2", "PDS", "ggplot2", "knitr", "rmarkdown")
# Write bib information
knitr::write_bib(PackagesUsed, file = "./MultipleReferences/PackagesUsed.bib")
# Load packages
lapply(PackagesUsed, library, character.only = TRUE)
```

This document uses (not really) `ggplot2` by Wickham and Chang (2015), `PDS` by A. T. Arnholt (2015), `PASWR2` by A. T. Arnholt (2014), `rmarkdown` by Allaire et al. (2015), and `knitr` by Xie (2015).
